2D ULTRASOUND SCANNING SESSION

GENDER SCAN £75

- One 15-20 minutes scan in 2D to determine the sex of the baby.
- This scan includes a well-being reassurance scan - to look at the heartbeat, movement and position of the baby. (This is not a detailed scan)
- Six black and white images of your baby's body and profile included.
- If your baby is lying in a good position we will do a short scan in 4D mode and give you a few black and white 4D images.

NOTE:

Gender scans can be performed after 17 weeks of pregnancy to determine the sex of your baby with an accuracy of 97% at the Hendon Clinic.

ADDITIONAL EXTRAS

- One CD-ROM of all the images of your baby in 2D £15
- One DVD of the 2D moving scan £15
(We will also include a few minutes of the 4D scan)

Please note that if you have a Gender scan with us you will automatically get a 10% discount on any future scans - including 4D scans

EARLY FETAL ASSESSMENT £105

- This scan is carried out between 6 weeks and 10 weeks of pregnancy.
- The main purpose is to confirm an interuterine pregnancy and if a single or multiple gestation. The scan also verifies fetal viability which includes assessing fetal heart beat and fetal movements-which is always reassuring for the Mother.
- The standard Early Fetal measurement are taken and you will be presented with a written report and several black and white images of your baby.
- This scan may involve an internal transvaginal scan if the pregnancy is very early. We recommend that you present our report and findings to your General Practitioner.

DATING AND FETAL VIABILITY £105

- This scan is carried out between 10 to 16 weeks of pregnancy.
- The main purpose is to confirm an interuterine pregnancy, if a single or multiple pregnancy, and to establish the gestational age. The scan also assesses fetal heart beat and fetal activity – this is always reassuring for the Mother.
- The optimal time to perform a dating scan is between 11 and 14 weeks. We recommend that you present our report and findings to your General Practitioner.

We can also put this scan on a DVD for you – if you request this at the time of scanning. An additional charge of £15 is required.

FETAL GROWTH SCAN £105

- This Ultrasound package is to verify Fetal Growth and is carried out between 24 to 34 weeks gestation.
- The scan includes measurements of the baby's head, abdomen and femur – and in addition and evaluation of the placenta and the amniotic fluid around the baby. We also assess the blood flow through the cord if required.
- You will be provided with a detailed report – plus several black and white images of your baby at the end of the scan.
- Many Mothers find this a very reassuring scan – as it is carried out in the period between their 20 week scan and birth.

Please bring your Hospital Obstetric Notes with you when you come for this scan.

PRESENTATION SCAN £105

- This scan is carried out between 35 to 42 weeks.
- The purpose of this scan is to identify if the baby is lying in the cephalic position (head down) or in the breech position (head up).
- A wellbeing scan is included and measurement similar to a Growth Scan are carried out.
- We will always try to give you several black and white images of your baby – but at this late stage the images may not be very clear.

Please bring your Hospital Obstetric Notes with you when you come for this scan.
